Objective

Software Engineering student with hands-on experience in MERN stack development, REST APIs, and full-stack application deployment. Strong foundations in DSA, OOP, and scalable web architecture, with practical experience building backend-driven and AI-integrated applications using JavaScript, Node.js, Python, and Flask.

Professional Experience

Web Developer Intern, Arch Technologies

March 2026 – April 2026

- Built responsive full-stack web applications using React.js, Node.js, and MongoDB.
- Developed RESTful APIs and implemented user authentication with CRUD functionalities.
- Improved frontend UI components using Tailwind CSS.

EDUCATION

Bachelor of Software Engineering, Lahore Garrison University

2024 – 2028

Fsc Pre-medical, Defence Degree College for Women

2022 – 2024

TECHNICAL SKILLS

Programming Languages — C++ | Python | JavaScript (ES6+)

Frontend — HTML5 | CSS3 | React.js | Tailwind CSS | Responsive Web Design

Backend — Node.js | Express.js | Flask | REST APIs | JWT Authentication

Database — MongoDB | Mongoose | SQL Server | SQLite3

Tools & Technologies — Git & GitHub | VS Code | Postman

Certificates

Complete Python Bootcamp: Learn Python from Scratch | Code with Harry

WordPress Development | DigiSkills.pk

Freelancing | DigiSkills.pk

Mexoxo Take the Lead | eCornell & Mexoxo

Projects

MERN Task Management Application, Full-Stack Project

- Built production-ready MERN stack app with scalable RESTful API and full frontend-backend integration.
- Implemented JWT authentication and Role-Based Access Control (RBAC) for User and Admin privilege management.
- Developed full CRUD task management with advanced filtering and automated due-date tracking.
- Designed responsive UI using Tailwind CSS; deployed via Vercel and Render.

DIGITAL LOGIC GATE SIMULATOR, C++ OOP PROJECT

- Built OOP-based C++ console simulator to model and evaluate logic gates (AND, OR, NOT, XOR).
- Applied Inheritance and Polymorphism for dynamic circuit creation and scalable logic processing.
- Implemented File I/O to enable saving and loading of circuit configurations and input data.

JOB APPLICATION ANALYZER, DSA PROJECT

- Built C++ application using Data Structures & Algorithms (DSA) to analyze and process job application data.
- Implemented sorting and searching algorithms for efficient data retrieval and handling.
- Optimized application performance through algorithmic problem-solving and complexity analysis.

Connectify, MERN Social Media Platform (Ongoing)

- Built full-stack social media platform with JWT authentication, real-time interactions, and post-sharing functionality.
- Integrated Cloudinary for media storage and developed responsive UI using Tailwind CSS.
- Deployed frontend on Vercel with separately hosted REST API backend.

Spotify Clone, Music Streaming App

- Built responsive Spotify-inspired music streaming application using JavaScript, Node.js, Express, and MongoDB with dynamic song loading, playlist functionality, and audio playback controls.
- Demonstrated strong frontend fundamentals including DOM manipulation and event handling without frameworks.

VidSnapAI, AI Video Generator

- Built AI-powered short-form video generation platform using Python and Flask with end-to-end text-to-video pipeline.
- Integrated Edge-TTS for voice synthesis and FFmpeg for automated media processing and video rendering.
